2006 County Health Profiles

Insert in the Contributions and Acknowledgement page the following statement:

All data analysis in this document were conducted by staff at the Montana Kids Count Program in the Bureau of Business and Economic Research at the University of Montana in contract with the Montana Department of Public Health and Human Services.

Page iv, Unemployment Rate: **2006** unemployment data tabulated for each county by the Montana Department of Labor and Industry, Research & Analysis Bureau, April 2007.

Footnote #3 on each county profile should read: ³**2006** MT Dept. Labor & Industry.

In the Montana column on the first page of all county profiles, Deaths per 1,000 Population: the number of Montana deaths should read (**n = 41,320**).

Deaths per 1,000 Population: the number of county deaths should read as follows:

Flathead page 29 – (**n = 3,455**)

Glacier page 35 – (**n = 537**)

Lewis & Clark page 49 – (**n = 2,346**)

Yellowstone page 111 – (**n = 5,804**)

Age-adjusted Heart Disease Death Rate: **all were incorrect and should read** as listed here:

Age-adjusted Heart Disease Death Rates 2000-2004

Montana	190.4	Golden Valley	155.0	Powder River	137.9
Beaverhead	163.9	Granite	218.1	Powell	191.6
Big Horn	200.6	Hill	225.9	Prairie	199.1
Blaine	212.2	Jefferson	232.1	Ravalli	163.1
Broadwater	166.4	Judith Basin	177.3	Richland	271.5
Carbon	194.4	Lake	187.6	Roosevelt	269.4
Carter	248.2	Lewis & Clark	178.0	Rosebud	243.4
Cascade	186.8	Liberty	183.2	Sanders	205.1
Chouteau	206.2	Lincoln	214.9	Sheridan	196.8
Custer	191.6	McCone	137.8	Silver Bow	253.2
Daniels	191.4	Madison	257.4	Stillwater	194.8
Dawson	190.5	Meagher	264.3	Sweet Grass	105.6
Deer Lodge	206.0	Mineral	217.5	Teton	166.5
Fallon	234.1	Missoula	168.3	Toole	171.2
Fergus	188.5	Musselshell	253.4	Treasure	118.0
Flathead	205.5	Park	147.7	Valley	213.3
Gallatin	136.9	Petroleum	152.2	Wheatland	227.5
Garfield	238.4	Phillips	233.9	Wibaux	353.3
Glacier	188.8	Pondera	198.1	Yellowstone	183.2

Motor Vehicle Accident Death Rate (per 100,000 population): the rate and/or number should read as follows for Montana and the listed counties:

Montana column, all counties – **24.4 (n = 1,115)**

Flathead page 30 – **23.7 (n = 92)**

Glacier page 36 – **67.8 (n = 45)**

Lewis & Clark page 50 – **14.5 (n = 41)**

Traumatic Injury Death Rate (per 100,000 population): the rate and/or number should read as follows for Montana and the listed counties:

Montana all county pages – **(n = 2,399)**

Yellowstone page 112 – **48.0 (n = 317)**

Page 33. **Unemployment Rate for Garfield Co.** should read **3.3%**, not **33%**.

Insert Revised Pages 113 and 114: **2006 Montana American Indian Profile.**

Insert Page 115. **List of Montana Tribal Health Directors.**

Also a **revised 2006 American Indian Health Profile** will be posted on the web for downloading.

The **entire 2006 County Health Profiles** PDF document, along with the **Errata sheet** is also posted on the DPHHS website at <http://www.dphhs.mt.gov/PHSD/health-profiles/health-profiles-index.shtml>

MONTANA COUNTY HEALTH PROFILES, 2006

This is the 2006 publication of the **Montana County Health Profiles**. The Public Health and Safety Division will update the Montana County Health Profiles (*Profiles*) every other year, based on the most recent available data. The *Profiles* give health providers, planners, and other policy makers consistent data for identifying health needs and evaluating plans and programs. An introductory section, "Definitions, Sources and Data Use Notes," defines the indicators and identifies the data sources. *Profiles* users are encouraged to refer to this section when using these data.

We recognize that this publication will not meet the needs of every planner or policy maker and will continue to be limited in the amount of information that can be presented in a concise format. However, we want the *Profiles* to be as useful as possible and welcome all comments and suggestions for improvement.

Two changes were made to the **2006 Montana County Health Profiles**:

- A two-page Montana American Indian Health Profile was added to the 2006 *Profiles* in an effort to help describe Montana's largest minority population.
- The section *Public Health Resources*, providing the number of full-time equivalent public health nurses, registered sanitarians, registered dietitians, and health educators for each county, was removed because updated information was not available.

The Public Health and Safety Division maintains and distributes sets of the County Health Profiles as reference documents and will provide individual county profiles as separate sheets. The Montana County Health Profiles are available on the division website at the address below or a hardcopy can be obtained by calling (406) 444-7374.

Public Health and Safety Division website: <http://www.dphhs.mt.gov/PHSD/>

A handwritten signature in blue ink that reads "Jane Smilie".

Jane Smilie, Division Administrator
Public Health and Safety Division

Contributions and Acknowledgements

The following individuals of the BRFSS Office of the Public Health and Safety Division, Montana Department of Public Health and Human Services were responsible for the development and preparation of this report:

- Susan J. Cummings, BSN, CPHQ, BRFSS Coordinator;
- Joanne Oreskovich, PhD, BRFSS Director/Epidemiologist.

The authors would like to thank the following individuals who compiled the research for this report:

- David Fulgham, PhD, Office of Vital Statistics, Montana Department of Public Health and Human Services;
- Thale Dillon, Economic Research Analyst, Montana KIDS Count, Bureau of Business and Economic Research of the University of Montana;
- Daphne Herling, Director of Community Research, Montana KIDS Count, Bureau of Business and Economic Research of the University of Montana;
- Dr. Steve Seninger, Director of the Bureau of Business and Economic Research of the University of Montana.

A special note of appreciation is given to the following organizations and individuals for their contributions to the compilation of Montana American Indian Health Profile:

- Dr. Jennifer Giroux, Chief Medical Epidemiologist, Rocky Mountain Tribal Epidemiology Center, Billings, MT;
- The Montana-Wyoming Tribal Leaders Council, Billings, MT.

This project was supported by the Preventive Health Block Grant funds (2007-B1-MT-PRVS) from the Centers for Disease Control and Prevention of the U.S. Department of Health and Human Services and from the Montana Department of Public Health and Human Services. The contents herein do not necessarily reflect the official views and policies of the U.S. Department of Health and Human Services or the Montana Department of Public Health and Human Services.

Population Estimates for Incorporated Places in Montana, by County	A-3

DATA DEFINITIONS, SOURCES AND DATA-USE NOTES

Data Year: Most County Health Profile information is based on events occurring in calendar year 2005, which is the most current data year, or an average of years 2000-2004. Census population *estimates* were used for 2000-2004 in determining five-year rates (U.S. Bureau of the Census: 2005 estimates released November, 2006; 2004 estimates released August 2005; 2003 estimates released January 2005; 2000-02 estimates released September 2004). Certain data items report *enumerations* from the 2000 Census (U.S. Bureau of the Census). Medicaid data reports enumerations from the 2005 state fiscal year (July 1, 2004 to June 30, 2005).

Data Sources: The specific sources of data are indicated below, with the data definitions. In general, vital data on reported pregnancy outcomes, births, and deaths were provided in electronic files by the Office of Vital Statistics, Montana Department of Public Health and Human Services (DPHHS). The Office of Vital Statistics receives reports on live births and fetal deaths for all Montana residents and induced abortions occurring within the state. There is no provision for reporting spontaneous abortions (miscarriages), regardless of where they occur, or induced abortions that occur outside Montana. Fetal deaths are reportable only after the fetus has reached 350 grams or, if the weight is unknown, 20 weeks of gestation.

Population data came from the Census and Economic Information Center (CEIC), Montana Department of Commerce, and the U.S. Census Bureau, in the format of downloadable files.

Data Reliability: Many Montana counties have small populations and, therefore, the number of events in a given year, or even when summed over several years, are small. Because of the small number of events, rates based on these numbers are likely to be unstable, varying substantially between years or over longer periods of time. To assist in interpreting these rates, we have generally provided rates that are averaged over a five-year period, 2000-2004, and provided the absolute number of events in parentheses next to the rate. Users of County Health Profiles are cautioned that these data are not intended for forecasting.

Death Rates: This document reports crude death rates throughout (except heart disease, where both a crude and age-adjusted rate are reported). Comparison of crude rates over time or between populations may be misleading if significant differences exist in the demographics (e.g., age, race) of the populations being compared; observed differences in rate may result solely from population differences. Nonetheless, crude rates characterize the experience of a population at a given point in time and are useful for planning and funding purposes.

County Description

Health Department and Health Officer: From listings maintained by the Montana Department of Public Health and Human Services (DPHHS) Public Health and Safety Division, accessed May 2007.

Reservation: The presence of a reservation is indicated for the primary county of American Indian (one race) residence for all Montana reservations. For reservations located in more than one county, the reservation is noted when the American Indian (one race) population of the county is greater than the Montana average (6.4%).

National Priorities List (NPL) Superfund Site: Information on active sites in Montana is from the Environmental Protection Agency website, accessed in April 2007. The National Priorities List is a published list of hazardous waste sites in the U.S. eligible for comprehensive, long-term cleanup under the Superfund program. Listing on the NPL makes a site eligible to receive Superfund monies for cleanup; however, listing does not automatically qualify sites for funding.

Metropolitan Area: As defined by the U.S. Office of Management and Budget (OMB) Metropolitan-Nonmetropolitan System. OMB standards generally provide that each metropolitan area must include at least: a) one city with 50,000 or more inhabitants, or b) a Census Bureau-defined urbanized area (of at least 50,000 inhabitants) and a total metropolitan population of at least 100,000 (75,000 in New England). By definition, the entire county containing the qualifying city/area is included as part of the metropolitan area. Metropolitan counties are not synonymous with wholly urban counties (as defined by the U.S. Census) and can contain significant rural populations. By this definition, Cascade County is "Metropolitan" (population density 29.5/sq. mi.) while Silver Bow County is "Nonmetropolitan" (population density 46.6/sq. mi.). See also "Population Density and Status" below.

Demographics

Population Density and Status: Population density is the calculated number of persons per square mile, based on the U.S. Census estimate of county population in 2005 and report of county size. An area is considered "Frontier" if the population density is 6 or fewer persons per square mile. A "Rural" area has more than 6 and fewer than 50 persons per square mile. All

Montana counties, except Yellowstone, are rural or frontier as defined by population density. To date, there has not been a consistent definition of the urban—rural—frontier continuum. The designations used in this report were developed by the U.S. Department of Health and Human Services, Bureau of Primary Health Care (1986). Visit the following websites for further discussion on this topic:

National Center for Frontier Communities - www.frontierus.org

National Agricultural Library Rural Information Center - www.nal.usda.gov/ric/ricpubs/what_is_rural.htm

Urban Population Percent: The percent of the population living in Urbanized Areas or Urban Clusters (defined by the U.S. Bureau of the Census) from a CEIC table of the Census 2000 Montana population (the most recent year for which this data is available). Urban Area and Urban Cluster boundaries encompass densely settled territories consisting of:

- Core census block groups or blocks that have a population density of at least 1,000 people per square mile and
- Surrounding census blocks that have an overall density of at least 500 people per square mile.

Additionally, an Urbanized Area must have a population of at least 50,000 people. An Urban Cluster must have a population of at least 2,500 and less than 50,000. All other territory is classified “Rural.”

Population Gender, Age, and Race: From the U.S. Census estimates of the 2005 county and state population, released in June 2006. “White” and “American Indian” race categories include those of one race only; “Other” includes all other single race persons as well as those indicating two or more races.

Educational Attainment: From the 2000 U.S. Census enumerations of counties and state.

Employment by industry: Lists the three largest industries in the county/state in terms of the percent of all full- and part-time jobs in the year 2005 (listed from largest to smallest); it includes both wage/salary employment and proprietors’ employment.

Since 2001, employment by industry data have been reported using a new classification system, the North American Industrial Classification System (NAICS). Prior to 2001, employment by industry data were reported by the Standard Industrial Classification System (SIC). Data from the two classification systems *cannot be directly compared*. For example, even though both systems include categories titled manufacturing, the industries included within each category are different. The U.S. Census Bureau’s NAICS website clarifies the differences between the two classification systems.

The statement “Incomplete data” in this section means information about the number of jobs was not available for *more than one industry* in the county (to avoid disclosure of confidential information) *and* the missing information corresponded to more jobs than the next largest industry (with number of jobs reported). Therefore, industries listed after the statement “Incomplete data” are the largest industries for which the number of jobs was reported; industries listed prior to this statement are accurate in their rank order. *Percents* associated with *all* listed industries *are accurate* because the total number of jobs in each county was available. However, in one case in this document an estimated percent (indicated by the symbol “~”) is reported for incomplete data, based on additional information.

“Notable others” are additional industries that comprise at least ten percent of full- and part-time jobs in the county.

Data are from the Regional Economic Information System of the U.S. Bureau of Economic Analysis and were released in April 2006.

Unemployment Rate: 2005 unemployment data tabulated for each county by the Montana Department of Labor and Industry, Research & Analysis Bureau, April 2007.

Median Household Income: 2004 U.S. Census estimates, 50% of the households in the county/state reported this total annual income or less.

Per Capita Income: Per capita income in 2004 is the mean income computed for every man, woman, and child in a particular group (in this case, each county and the state). It is computed by dividing the total income of the group by the number of individuals in the group. Data are from the Regional Economic Information System of the U.S. Bureau of Economic Analysis.

Percent of the Population Below the Federal Poverty Level: Poverty status is shown in two ways:

- 1) *By age group* lists two age categories, including the total area population “All ages”, which indicate the percent of people in each category living below the federal poverty level. Data for “All ages” and “<18” are 2004 U.S. Census estimates.
- 2) *By income as a percent of the federal poverty level* lists four categories of the ratio of income in 1999 to the federal poverty level (FPL). For example, income equal to the federal poverty level (ratio 1.0) is 100% of the FPL, income half of the federal poverty level (ratio 0.5) is 50% of the FPL, income 1.5 times the federal poverty level is 150% of the FPL. The percent of the population living below each of the four income categories is indicated. These data are from the U.S. Census 2000 Summary File 3 (SF3) data and are based on reported income in 1999.

Percent of Population with Health Care Costs Covered by a Government Payor: The percent of the population on Medicaid is the count of persons enrolled in Medicaid for a minimum of one month during the 2005 state fiscal year (July 1, 2004 to June 30, 2005) divided by the 2005 Census population estimate for the area. An individual is counted for each county of enrollment (duplicated) but only once (unduplicated) for the total state enrollment. The Medicaid Services Division of DPHHS provided these data.

The percent of the population on Medicare is the count of all Montana-resident beneficiaries with any type of Medicare coverage during the month of June 2005 (mid-year) and not known to be deceased as of June 1, 2005, divided by the 2005 Census population estimate for the area. Medicare data were provided by the Mountain Pacific Quality Health Foundation.

Percent of the Population with a Disability: From the 2000 U.S. Census, this measure indicates disability of the civilian, non-institutionalized population 21 years and older. People 5 years old and over are considered to have a disability if they have one or more of the following: (a) blindness, deafness, or a severe vision or hearing impairment; (b) a substantial limitation in the ability to perform basic physical activities, such as walking, climbing stairs, reaching, lifting, or carrying; (c) difficulty learning, remembering, or concentrating; or (d) difficulty dressing, bathing, or getting around inside the home. In addition to the above, people 16 years old and over are considered to have a disability if they have difficulty going outside the home alone to shop or visit a doctor's office, and people 16-64 years old are considered to have a disability if they have difficulty working at a job or business.

Live Births and Deaths per 1,000 Population: Number of vital events (births or deaths) occurring in the five-year period, 2000-2004, divided by the total area midyear population and multiplied by 1,000. Births are enumerated by the mother's county of residence; deaths by the decedent's county of residence. Data are from the Office of Vital Statistics, DPHHS.

Median Age by Gender and Race: The midpoint in the range of ages (i.e., 50% of the persons in the category were the median age or older). "White" and "Am Ind" include those of one race only, showing data from the U.S. Census Bureau, Census 2000. Data for the categories "All", "Male" and "Female" are 2005 Census Estimates.

Median Age at Death: The midpoint in the range of ages at death (i.e., 50% of the persons in the category were the median age or older at the time of death). Either racial category may include "Hispanic"; "All" also includes unknown race. Data are from the Office of Vital Statistics, DPHHS, for the five-year period 2000-2004.

Health Status Indicators

Fertility Rates: The *teen fertility rate* per 1,000 population is the five-year (2000-2004) sum of births to females aged 15 to 19 divided by the five-year sum of females in the population aged 15 to 19, multiplied by 1,000. The *fertility rate for all women* is the five-year (2000-2004) sum of births to all females divided by the five-year sum of females in the population aged 15 to 44, multiplied by 1,000. The populations of women younger than 15 and older than 44 are not used in this denominator because relatively few of the women in these age groups are likely to give birth. Including total populations for those age groups in the denominator would yield an underestimate of the true fertility rate. This calculation method, used throughout the U.S., yields a slight overestimate of the true rate. Data on births from 2000 through 2004 are from the Office of Vital Statistics, DPHHS, while female population estimates are from CEIC.

Timing of Prenatal Care: Measured by the births to women who began receiving prenatal care during the first trimester (the first three months) of pregnancy as a percent of all births for which the timing of prenatal care is known. These data represent five-year averages (2000-2004) and were provided by the Office of Vital Statistics, DPHHS.

Births with unknown timing of prenatal care were excluded from the total number of births (denominator) in calculating this percent. Editions of the County Health Profiles prior to 2002 included these births in the denominator and may have underestimated the percent of prenatal care beginning in the first trimester to a small degree.

Adequacy of Prenatal Care (as measured by the Kotelchuck index): Based on birth certificate data (2000-2004) from the Office of Vital Statistics, DPHHS, this index attempts to characterize two dimensions of prenatal care.

- 1) Adequacy of initiation of prenatal care (i.e., the month care begins – assuming the earlier the care begins, the more adequate the prenatal care).
- 2) Adequacy of received services, once prenatal care has been initiated (a ratio of the actual number of visits to the expected number of visits per American College of Obstetricians and Gynecologists' prenatal care visitation standards for uncomplicated pregnancies).

These two dimensions are combined into a single "Adequacy of Prenatal Care Utilization Index. Readers unfamiliar with this index, its assumptions and limitations are referred to: Kotelchuck, M. 1994. Am. Journal of Public Health. Vol. 84: 1414-1420.

Births with unknown prenatal care status were excluded from the total number of births (denominator) in calculating this percent. Editions of the County Health Profiles prior to 2002 included these births in the denominator and may have underestimated the percent of adequate prenatal care to a small degree.

Percent Low Birthweight: Percent of births for which the weight of the newborn was less than 2,500 grams (5 lbs. 8 oz.). Data are from the Office of Vital Statistics, DPHHS, for the five-year period 2000-2004.

Infant Mortality: Rate of infant (from birth to 364 days old) deaths per 1,000 live births during the five-year period 2000-2004. Data are from the Office of Vital Statistics, DPHHS.

Cancer Incidence Rate: Number of new cancer cases diagnosed during 2000-2004 per 100,000 population. This incidence is *age-adjusted* to the U.S. 2000 standard-million population. The 1999 and earlier editions of this publication used the U.S. 1970 standard-million population and therefore, *the cancer incidence rates in this edition cannot be compared to the rates in those editions*. The age-adjusted rates include all malignant cancers plus in-situ bladder cancers. County incidence rates may be based upon a small number of cases and unstable; the 95% confidence interval is indicated in parentheses. The Montana Tumor Registry, DPHHS, provided the cancer incidence data.

Leading Causes of Death: The three causes of death that occurred with greatest frequency from 2000 through 2004 (the first cause listed being the most frequent). Death rates are not shown (except heart disease, see below) because they may be unreliable for many counties. Data are from the Office of Vital Statistics, DPHHS.

(CLRD = chronic lower respiratory diseases, an ICD-10 category which replaced the ICD-9 category chronic obstructive pulmonary diseases (COPD). The categories differ in that CLRD does not contain those causes of death in ICD-9 rubric 495, which include “extrinsic allergic alveolitis.”)

Heart Disease Death Rate: The number of resident deaths in 2000-2004 from heart disease per 100,000 population. Both the *crude* rate and the *age-adjusted* rate are reported for heart disease because of the significant contribution of age to the incidence of death from heart disease. County level statistics may be unreliable due to small numbers and should be used cautiously. Heart disease includes: acute rheumatic fever; chronic rheumatic heart diseases; hypertensive diseases (except essential hypertension); hypertensive heart and renal disease; ischemic heart diseases; pulmonary heart disease and diseases of pulmonary circulation; and other forms of heart disease. Data are from the Office of Vital Statistics, DPHHS.

Cause-Specific Death Rates, provided for Motor Vehicle Accidents, Suicide, and Traumatic Injury: The number of resident deaths in 2000-2004 from the stated cause per 100,000 population. These rates are presented because Montana death rates are generally higher than national rates for these causes. County-level statistics may be unreliable and should be used cautiously. Deaths are tabulated by the deceased’s county of residence and therefore do not indicate where the accident, suicide or injury occurred. Data are from the Office of Vital Statistics, DPHHS.

Percent of Motor Vehicle Crashes Involving Alcohol: The percent of all motor vehicle crashes that *occurred* in the county or state during 2002-2006, were reported to the Montana Highway Patrol, and involved the use of alcohol. When used as an indicator of the prevalence of drinking and driving among residents of the county/state, this measure may be limited by the inclusion of crashes involving non-residents, the exclusion of resident crashes that occurred in other counties/states, or by the absence of accidents that were not reported. Data are from the Montana Department of Transportation.

Percent of Medicaid Population Receiving Mental Health Services: The number of Medicaid eligible persons who received mental health services divided by the total number of Medicaid eligible persons in the county/state. Mental health service data were provided by the Addictive and Mental Disorders Division, DPHHS; the Health Resources Division, DPHHS, provided the data on Medicaid eligibility. All data are for state fiscal year 2005 (July 1, 2004 to June 30, 2005).

Percent of 2-Year Olds Seen by a Health Care Provider Who are Fully Immunized: A sample proportion of children, from 24 through 35 months of age, who have a vaccination history on file with a vaccine provider indicating their immunization status as up to date. Up to date immunization status means: diphtheria, tetanus and pertussis - 4 doses; polio - 3 doses; H. influenzae type b (Hib) - 3 doses; measles, mumps and rubella -1 dose; hepatitis B – 3 doses. This statistic is an indicator of the vaccination status of children from 24 to 35 months of age *who are seen by a health care provider*. These data are from the Immunization Section of the Communicable Disease Control and Prevention Bureau, DPHHS, for the year 2006.

STD Incidence: The number of reportable new cases of sexually transmitted diseases (chlamydia, gonorrhea, syphilis) per 100,000 population during 2000-2004. Data are from the STD/HIV Section of the Communicable Disease Control and Prevention Bureau, DPHHS.

Health Resource Assessment

Hospitals, Critical Access Hospitals (CAH), Nursing Homes, Aging Services, and Home Care Services: Numbers of state licensed facilities are counts of licenses recorded as of January 2007 in the Licensure Bureau, Quality Assurance Division, DPHHS. Home health and hospice agencies may be licensed to deliver services in more than one county and are listed by each county of service delivery (a duplicated count of agencies). The licensure list is continuously updated – the most current information available can be obtained by calling the Licensure Bureau at (406) 444-7770 or by accessing the DPHHS website.

Critical Access Hospitals are limited service hospitals designed to provide essential services to rural communities. The Balanced Budget Act of 1997 established the Medicare Rural Hospital Flexibility Program (RHFP), which provided grants to states for designation of hospitals as Critical Access Hospitals. Because of relaxed staffing requirements and cost-based reimbursement for Medicare and Montana Medicaid patients, converting a struggling rural hospital to a CAH can allow the community to stabilize and maintain local health care access. The count of Critical Access Hospitals includes two IHS facilities, one in Big Horn County (Crow Agency) and one in Blaine County (Harlem).

When the number of beds is shown, it represents the total number of beds in all facilities of the stated type in the county/state.

Rural Health Clinics, Community Health Centers, and Indian Health Service (IHS) and Tribal Health Facilities: The Montana Primary Care Association maintains information on certified Rural Health Clinics and on federally qualified Community Health Centers (supported in part by federal grants). The count of Community Health Centers in this publication includes satellite locations as well as five urban Indian health clinics (one each located in Great Falls, Helena, Missoula, Butte, Billings). This information was current as of 2007.

The Billings Area Indian Health Service (IHS) provided IHS-Tribal health facility information in April 2007. IHS facilities include hospitals, critical access hospitals, and health centers/clinics; health centers/clinics that are part of a hospital facility are not counted separately from the hospital. Tribal health facilities include health centers/clinics. Counts are combined into a single statistic, "IHS-Tribal Health Facilities."

Availability of 9-1-1 Service: Based on information from the Montana Department of Administration 9-1-1 Program website, March 2007. A 9-1-1 call goes over dedicated phone lines to the 9-1-1-answering point closest to the caller, and trained personnel then send the emergency help needed. Enhanced 9-1-1 is a system which routes an emergency call to the 9-1-1 center closest to the caller AND automatically displays the caller's phone number and address. In most areas, information about phone number and location is not yet available for 9-1-1 calls made from a cellular phone.

Availability of Emergency Medical Services: The Emergency Medical Services (EMS) and Trauma Systems Program of the Chronic Disease Prevention and Health Promotion Bureau, DPHHS, provided information on the type, number, and location of emergency medical service providers in each county, current as of March 2007. "Basic life support service" means an ambulance service or non-transporting medical unit capable of providing care only at the basic life support level. "Advanced life support service" means an ambulance service or non-transporting medical unit that has the capacity to provide care above basic life support at the EMT-Paramedic equivalent level 24 hours a day, seven days a week. See the Administrative Rules of Montana (ARM 24.156.2701) for further clarification.

Primary Care Provider Resources:

Licensed Medical Doctors (MDs) and Doctors of Osteopathic Medicine (DOs): The Board of Medical Examiners (Montana Department of Labor and Industry) maintains records of active, licensed MDs and DOs in Montana (obtained in April 2007). The Billings Area IHS office maintains a list of IHS physicians (obtained in June 2007). The *estimated* count of primary care MDs and DOs includes those listed with one or more of the following practice areas: family practice, general practice, geriatric medicine, internal medicine, pediatrics, and obstetrics-gynecology. These lists were cross-referenced, as necessary, with the Montana Medical Association Directory of Montana Physicians (2007) to clarify practice area or retirement.

Nurse Practitioners and Nurse Midwives: The Board of Nursing (Montana Department of Labor and Industry) maintains records of active, licensed nurse practitioners and nurse midwives in Montana. These counts are from a licensure list obtained in April 2007.

Physician Assistant Certified (PA-C): The Board of Medical Examiners (Montana Department of Labor and Industry) maintains records of active, licensed PA-Cs in Montana. The count of PA-Cs is from a licensure list obtained in April 2007.

Dental Health Resources: The count of active, licensed Montana dentists and dental hygienists. Information was obtained from the Board of Dentistry (Montana Department of Labor and Industry) in April 2007.

Health Care Provider Shortage Status: The Health Resources and Services Administration (U.S. Department of Health and Human Services) maintains an information website about designations of Health Professional Shortage Areas (HPSA), Medically Underserved Areas (MUA), and Medically Underserved Populations (MUP). The information provided in this publication was current as of April 2007. “All” means the whole county has HPSA designation (either as a county designation or as a sum of smaller area designations). “None” means either there is not a shortage in this county or an application for HPSA status has not been submitted or approved. “CCD” stands for Census County Division; “CT” stands for Census Tract.

HPSAs are designated by the Health Resources and Services Administration. The **basic** criterion for a primary medical care designation is: 3,500 or more people served by a single primary care physician. High need or risk indicators, i.e. high infant mortality rates, high percentage of poverty population, may drop the required ratio to 3000:1

HPSA designation may be awarded based on the following specialties:

- A. Primary Medical Care HPSA - Areas with shortages of primary care physicians (Family Practitioners, General Practitioners, Obstetricians/Gynecologists, Pediatricians, Internal Medicine).
- B. Mental Health HPSA - Areas with shortages mental health professionals (Psychiatrists, clinical Psychologists, Psychiatric Nurses, Psychiatric Social Workers and Marriage and Family Therapists).
- C. Dental HPSAs - Areas with shortages of dentists, dental hygienists, and dental auxiliaries.

¹ U.S. Census Bureau, 2005 American Community Survey (intercensal Population Estimates Program data were not available). These estimates should be interpreted with caution because of relatively wide confidence intervals. For more information: www.census.gov.

² U.S. Census Bureau, Census 2000 Summary File 4 (SF4).

³ 2005, Bureau of Economic Analysis (BEA). The BEA does not do racial break-downs of its data.

⁴ DNC=Data Not Collected.

⁵ 2005, Medicaid Services Division of Montana Department of Public Health and Human Services (MT DPHHS).

⁶ 2007, Mountain Pacific Quality Health Foundation.

⁷ 2000-2004, Office of Vital Statistics, MT DPHHS.

MONTANA AMERICAN INDIAN HEALTH PROFILE
2006

HEALTH STATUS INDICATORS	American Indian		Montana (total population)	
	Teen	All Women	Teen	All Women
Fertility Rates (teen births per 1,000 teen females; all births per 1,000 females of childbearing age) ⁷	100.9 (n=1,636)	98.0 (n=6,983)	35.9 (n=6,213)	60.7 (n=55,836)
Prenatal Care (percent beginning care in the first trimester; percent receiving adequate, i.e., early and continuous prenatal care) ⁷	1 st Trimester	Adequacy	1 st Trimester	Adequacy
	65%	50%	83%	73%
Percent Low Birthweight (below 5 lbs. 8 oz.) ⁷	7.3%		6.9%	
Infant Mortality (deaths per 1,000 live births) ⁷	8.0		6.2	
Cancer Incidence Rate (diagnoses per 100,000 population) ^{7, 8}	301.6		521.4	
<i>Age-adjusted Cancer Incidence Rate</i> ⁸	595.0 (±42.3)		478.7 (±12.3)	
Leading Causes of Death ⁷	1. CANCER	2. ACCIDENT	1. HEART DISEASE	2. CANCER
	3. HEART DISEASE		3. CEREBROVASCULAR DISEASE	
Heart Disease Death Rate (per 100,000 population) ⁷	105.2 (n=322)		212.2 (n=9,686)	
<i>Age-adjusted Heart Disease Death Rate</i> ⁷	233.0		190.4	
Motor Vehicle Accident Death Rate (per 100,000 population) ⁷	66.3 (n=203)		24.4 (n=1,115)	
Suicide Rate (per 100,000 population) ⁷	17.3 (n=53)		19.0 (n=866)	
Traumatic Injury Death Rate (per 100,000 population) ⁷	75.1 (n=230)		52.6 (n=2,399)	
Percent of Motor Vehicle Accidents Involving Alcohol ⁹	DNC		9.7%	
Percent of the Medicaid Population Receiving Mental Health Services (FY2005) ¹⁰	14.2%		27.8%	
Percent of 2-yr. Olds Seen by a Health Care Provider Who are Fully Immunized (2005) ¹¹	85%		90% (n=2,439)	
STD Incidence Rate (reported cases per 100,000) ¹²	1,169.7 (n=3,580)		217.8 (n=9,941)	

⁷ 2000-2004, Office of Vital Statistics, MT DPHHS.

⁸ 2000-2004, Montana Tumor Registry, MT DPHHS.

⁹ 2000-2004, Montana Department of Transportation. Responding officer makes the determination as to alcohol involvement for each incident, but does not note race of persons involved.

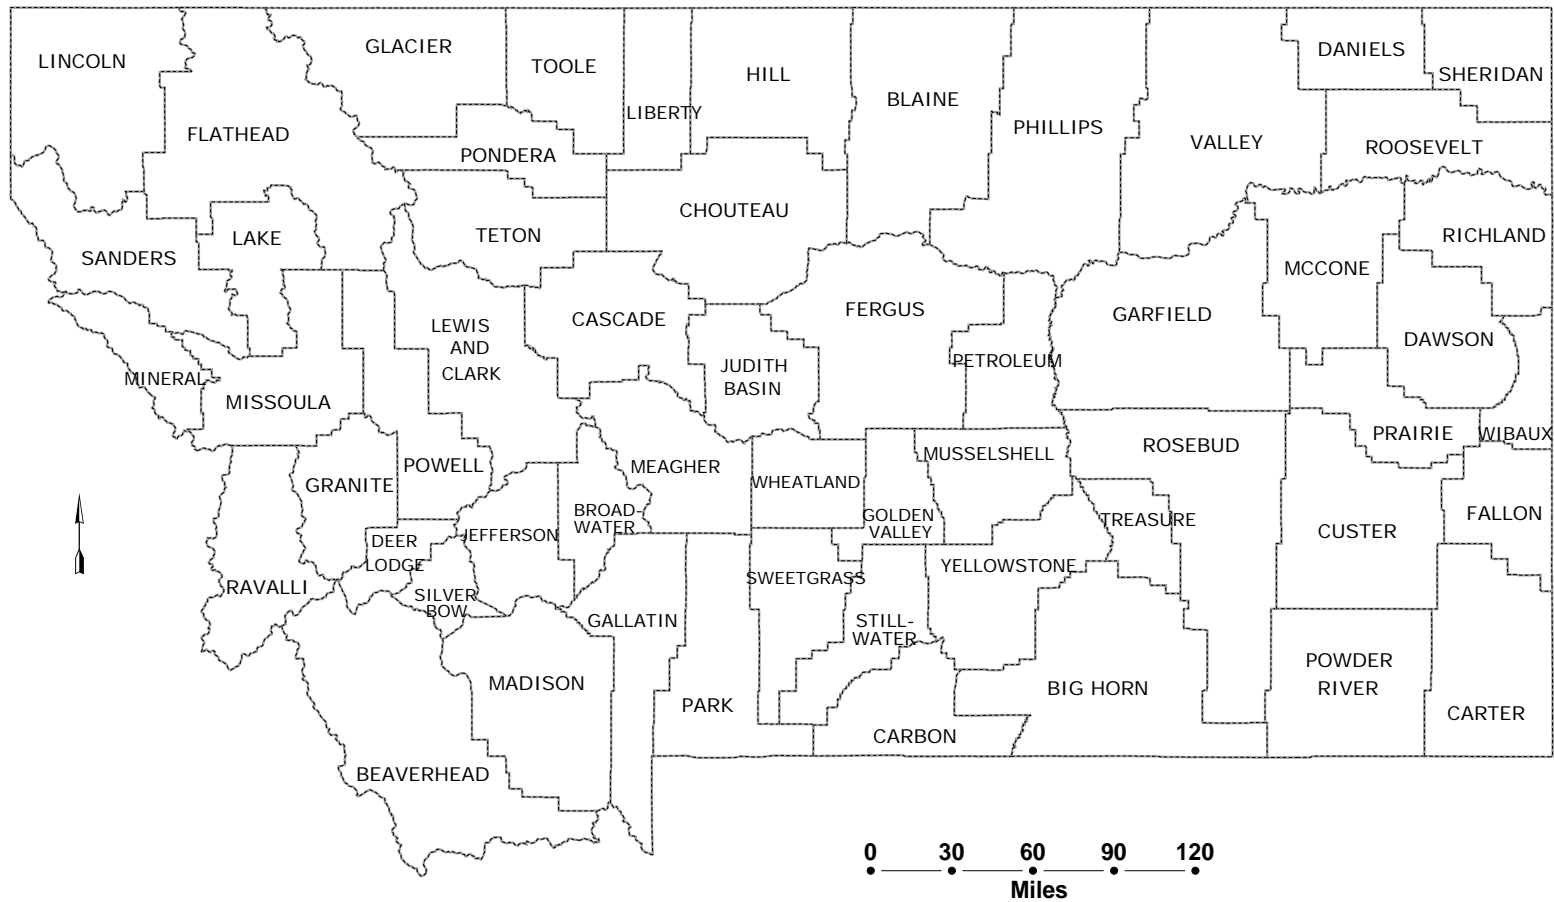

¹⁰ Medicaid Services Division, MT DPHHS.

¹¹ Rate for Montana total population from Communicable Disease Control and Prevention Bureau, MT DPHHS. Immunization rate for American Indians from the Indian Health Service Immunization Registry.

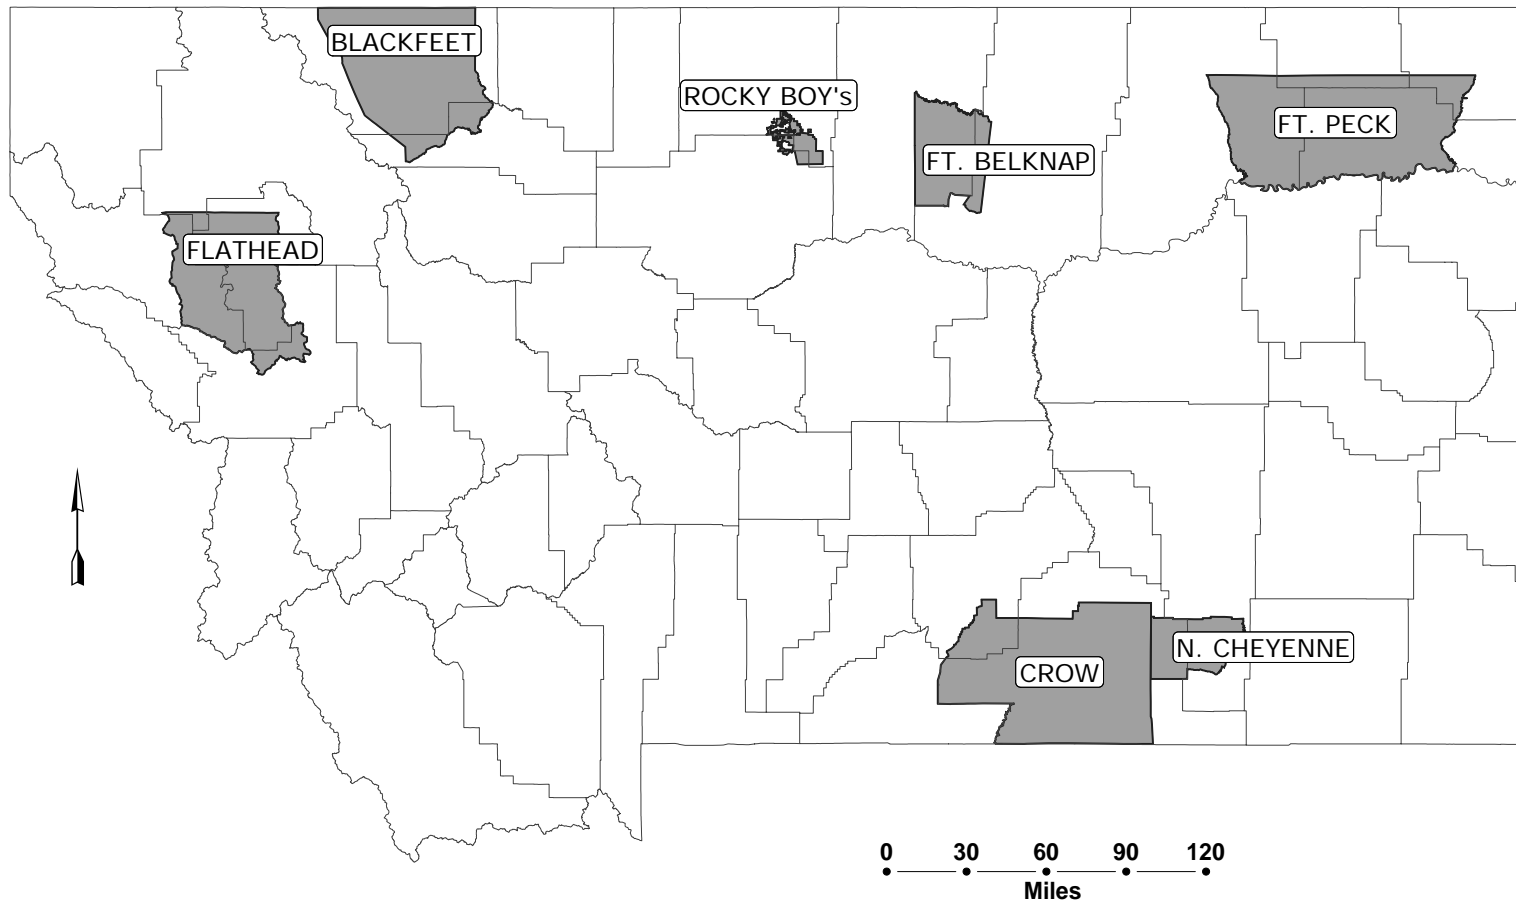

¹² 2000-2004, Communicable Disease Control and Prevention Bureau, MT DPHHS. STDs include chlamydia, gonorrhea and syphilis.

<p>Note: The April 1, 2000 Population Estimates Base reflects modifications to the Census 2000 population as documented in the Count Question Resolution program, updates from the Boundary and Annexation Survey, and geographic program revisions. An "(X)" in the Census 2000 field indicates a locality that was formed or incorporated after Census 2000 or was erroneously omitted from Census 2000. Additional information on these localities can be found in the Geographic Change Notes (see "Boundary Changes" under the Geographic Topics section of the Estimates page). Dash (-) represents zero or rounds to zero.</p>
